

Masterbuilt USA

“Known for quality & design”

Masterbuilt's cooking products set the standard. If your looking to get the most flavour out of your food, then this Masterbuilt 78cm (30") Electric Smokehouse is the perfect choice.

The powder coated insulated steel outer construction smoker, features thermostatically controlled temperature for even consistent cooking, unlike charcoal smokers.

Insulated walls allow you to smoke food in the coldest of temperatures. Clean up is easy thanks to the rear mounted grease pot and removable drip pan. This electric meat smoker also features an easy access top air damper, side wood chip loader, and adjustable door latch. You can use any wood pellets or chips & there is also a growing range of accessories.

The automatic shut-off provides safety and ensures against overheating. You also get plenty room on the four smoking racks for your favourite food of choice.

Use the smoker solely for smoking meats or try it without the smoke for your Sunday roast with vegetables. Smoke tomatoes or chillies for your next relish or dry them out completely by leaving the damper open and use them in a pasta sauce or on top of a pizza. Imagine a smokey flavour in your next garlic bread. Make your own smoked Salmon or simply use it as an outdoor slow cooker or keep meals hot when your oven is full. Cheese, Tofu, Vegetables, Lentils, it does not have to be a meat product! You can add a smokey flavour to any food type. So Simple !!

This Masterbuilt smoker has been specifically manufactured for Australia under the watchful eye of Masterbuilt China. The Masterbuilt factory adheres to the strictest quality control standards from manufacturing to packaging. Masterbuilt products are only sold in USA & Canada and now in Australia and New Zealand.

We handed our demo model over to one of our long term customers for some unbiased testing. He really put it through its paces and loved it so much he did not want to give it back.

▼▼ Here's what he had to say !

*Hi Andrea,
Well we've had a pretty good play with the smoker and I give it the thumbs up. I've done all of the recipes in the book that came with it plus a few of my own and one by one they are turning out great. I'm going to get creative with it next week when I get more time. The first thing I did was a smoked chicken and it was to die for. Mario doesn't want to give it back!*

Pros: Smokes really well, Found it easy to use, Very well constructed and easy to clean. Smokes and cooks the same every time. The timer control is fantastic and works really well. Is a good size for what it does, I have fed up to ten people in one sitting using just the smoker.

Cons: Bit of trial and error in cooking, using their recipes and times. With a bit of practice, you can cook up a storm with it.

I have found it a great smoker oven and would recommend it to anyone that likes that real smoke flavour in their cooking.

Regards, Gary of Harrierville Vic
